RMarkdown

Markdown

Markdown is a simple formatting language designed to make authoring content easy for everyone. Rather than write in complex markup code (e.g. HTML or LaTex), you write in plain text

Markdown

- Header
- Text
- Inline R code
- Code chunks

Header

- R Markdown documents can contain a metadata section that includes title, author, and date information
- As well as options for customizing output

```
title: "Wheat infected by Xanthomonas protein analysis"
author: "University of Insubria - Dept. of Biotechnology and Life Science"
output:
pdf_document:
includes:
in_header: header.tex
number_sections: yes
toc: yes
toc_depth: 4
fig_caption: true
fig_width: 10
fig_height: 8
```

Text

- Text can be added to comment you code
- Text can be added to comment your outputs

R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, P and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.co List:

```
- Element 1

- **Element 2**

- *Element 3*[^1]

[^1]: Note
```

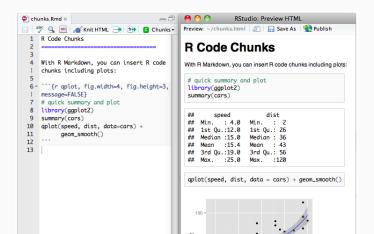

Inline R code

- R expressions can be evaluated inline
- Enclosing the expression within a single back-tick qualified with r.

R chunck

 R Code Chunks can be embedded with the native Markdown syntax for fenced code regions

R chunck options [few of them]

There are six types of output:

• **source code**: use chunk option <u>'echo'</u>, e.g. echo=FALSE hides the R code

R chunck options [few of them]

- source code: use chunk option <u>'echo'</u>, e.g. echo=FALSE hides the R code
- normal text output: use option results (<u>'markup'</u> marks up the results; <u>'asis'</u> return texts as-is; <u>'hide'</u> hides the results)

R chunck options [few of them]

- source code: use chunk option <u>'echo'</u>, e.g. echo=FALSE hides the R code
- normal text output: use option results (<u>'markup'</u> marks up the results; <u>'asis'</u> return texts as-is; <u>'hide'</u> hides the results)
- messages: option message (<u>'FALSE'</u> hides messages in the output)

R chunck options [few of them]

- source code: use chunk option <u>'echo'</u>, e.g. echo=FALSE hides the R code
- normal text output: use option results (<u>'markup'</u> marks up the results; <u>'asis'</u> return texts as-is; <u>'hide'</u> hides the results)
- messages: option message (<u>'FALSE'</u> hides messages in the output)
- warnings: option warning (<u>'FALSE'</u> hides warnings in the output)

R chunck options [few of them]

- source code: use chunk option <u>'echo'</u>, e.g. echo=FALSE hides the R code
- normal text output: use option results (<u>'markup'</u> marks up the results; <u>'asis'</u> return texts as-is; <u>'hide'</u> hides the results)
- messages: option message (<u>'FALSE'</u> hides messages in the output)
- warnings: option warning (<u>'FALSE'</u> hides warnings in the output)
- errors: option error (<u>'FALSE'</u> will make R stop if an error occurs; <u>'TRUE'</u> will show the error messages in the output)

R chunck options [few of them]

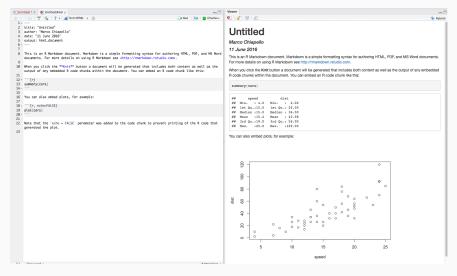

- source code: use chunk option <u>'echo'</u>, e.g. echo=FALSE hides the R code
- normal text output: use option results (<u>'markup'</u> marks up the results; <u>'asis'</u> return texts as-is; <u>'hide'</u> hides the results)
- messages: option message (<u>'FALSE'</u> hides messages in the output)
- warnings: option warning (<u>'FALSE'</u> hides warnings in the output)
- errors: option error (<u>'FALSE'</u> will make R stop if an error occurs; <u>'TRUE'</u> will show the error messages in the output)
- plots: option <u>'fig.keep'</u> (<u>'none'</u> discards all plots; <u>'all'</u> for all plots including low-level plots; 'high' for high-level plots)

GOAL: CREATE A DEFAULT MINIMAL DOCUMENT

• Open RStudio

- Open RStudio
- Select File > New file > R Markdown

- Open RStudio
- Select File > New file > R Markdown
- Create an HTML document

- Open RStudio
- Select File > New file > R Markdown
- Create an HTML document
- Suppress the printing of the R code

- Open RStudio
- Select File > New file > R Markdown
- Create an HTML document.
- Suppress the printing of the R code
- Suppress the printing of the R results

- Open RStudio
- Select File > New file > R Markdown
- Create an HTML document
- Suppress the printing of the R code
- Suppress the printing of the R results
- Suppress the printing of the plot

GOAL: CREATE A DEFAULT MINIMAL DOCUMENT IN OTHER FORMATS

- Create a pdf document
- Create a docx document

GOAL: CREATE A RMARKDOWN DOCUMENT

- Using the dataset4.csv
- Create a document containing analysis, plots and comments

GOAL: CREATE A RMARKDOWN DOCUMENT

- Using the dataset4.csv
- Create a document containing analysis, plots and comments
- Run your Rmarkdown document using 'dataset5.csv'
